

**Housing / Garden(kolonihage)**

The housing is two volumes having common courtyard in between. Two stories building and every apartment consists of two floors, and all has

private main entrance directly from the street. The entrance door is not visible from the street facade even if it is very easily accessed from the street, there are enough porch area and a storage space. First floor is a big room with a big window view

towards the garden and can be used as living and dining space and also roofed terrace in between livingroom and the garden. Bedrooms are on the second floor with vertical windows allowing looking out to the street and garden. The concept for the

housing allows for three sizes: 2-3 room apartments of 42-62 sqm, and 4-5 room apartments of 104 sqm. To change a section, from one 4-5 rooms, to two 2-3 rooms, would require a slight alteration to the facade, and having a different solution for the stairs.

Brick is the material for the housing that is as close to, or if possible the same, as the Helsingborg brick used for the warehouse. We also propose a facade that mimics the rhythm and uniformity of the existing warehouse.

Housing Facade from Street

Housing 2nd floor

The Tomb of Nebamun from the Dynasty XVIII was located in the Theban Necropolis located on the west bank of the Nile at Thebes (present-day Luxor), in Egypt, 1350
